

Tools and Methodologies

The air quality analysis tools below are intended to assist lead agencies in analyzing air quality impacts from proposed land use projects and plans.

The Air District provides some analytical tools to assist practitioners in evaluating air quality and greenhouse gas impacts during the environmental review process pursuant to the California Environmental Quality Act, or CEQA.

The tools provided in the tables below do not represent an exhaustive list and should be used in conjunction with other resources.

The Air District's stationary source, highway, and roadway screening analysis tools listed in the tables below are currently **not recommended** for evaluating sensitive land uses, such as schools, senior centers, daycares, and health centers. A site-specific analysis should be conducted for projects involving these sensitive land uses. Lead agencies should contact the Air District to obtain more recent data for a site-specific analysis and guidance for complying with air quality analysis.
