Re: Addendum to the report dated April 2000, documenting the advancement of eleven exploratory soil probes at 341 N. Montgomery Street, San Jose, California

Dear Ms. Drogos,

As per your request during a telephone conversation with Mr. Ken Meleen, CA Licensed Civil and Geotechnical Engineer, with Life Springs Environmental, additional calculations were performed for five oxygenates as follows: Tert-Butanol, MTBE, Di-isopropyl Ether, Ethyl tert-Butyl Ether, and Tert-Amyl methyl Ether.

The assessment report documented the installation of five (5) soil borings advanced in the area of a former 6000-gallon gasoline underground storage tank (UST). Groundwater samples were collected within these exploratory borings and analyzed for Total Petroleum Hydrocarbons as Gasoline (TPHg) and Benzene, Toluene, Ethylbenzene, Total Xylenes (BTEX) using EPA Method 5020/8015, Volatile and Halogenated Hydrocarbons using EPA Method 8260, and MTBE and 1,1,1-Trichloroethane using EPA Method 8260.

As you requested, groundwater collected within the two down gradient exploratory borings GP-1 (A,B,C) and GP-3 (C,D,E) previously analyzed for volatile and halogenated hydrocarbons were additionally calculated for five oxygenates and reported to be "non-detect" for each of them.

Please find the attached table of analytical results which were included in the original report and the additional results for five oxygenates. Chain of Custody and the laboratory results are also attached to this addendum.

Should you have any questions, please feel free to contact Mr. Ken Meleen at Life Springs Environmental at (650) 965-9392.

Sincerely,

Helen Mawhinney
Senior Environmental Specialist
