Hello

Attached is the ARG memo to be attached to the HLC memo for early referral on the Google Project 1-15-2020.

I review the memo and it is perfect!, yeah!

Thanks Juliet

Memorandum

To: Juliet Arroyo

Historic Preservation Officer, City of San Jose

Project: Downtown West Mixed-Use Plan – Preliminary Historic Resources Information

Project No.: 190519

Date: 12/20/2019

Via: Email

The Downtown West Mixed-Use Plan (proposed project) proposes a mix of office, residential, hotel, and various active land uses for the approximately 80-acre Project Area located around the Diridon Station west of downtown San Jose. As a part of the California Environmental Quality Act (CEQA) environmental review process for the proposed project, listed and eligible historic resources in and adjacent to the Project Area must be identified. In support of the environmental review, the project applicant has retained Architectural Resources Group (ARG) to identify and evaluate historic resources within the Study Area, which includes both Project Area properties (within the project core) and Buffer Area properties (within 200 feet of project core). (Note that ARG will only evaluate properties within the Project Area for historical significance, but will document adjacent historic properties in the Buffer Area for use in assessing impacts in the future.) This memo presents a summary of ARG's work completed to date to inform the discussion of the proposed project at the Historic Landmarks Commission meeting on January 15, 2020.

ARG staff conducted survey fieldwork in San Jose on September 19, 2019, has completed archival research on the history and development of the Study Area, and is in the process of drafting a context statement and updated assessments for potential historic resources within the Project Area. Located adjacent to the historic Diridon Station and associated rail corridor, the Study Area consists of a mix of industrial, commercial, and residential construction. A significant amount of demolition (and some modern construction) has occurred within the Study Area in recent decades, leaving a combination of large vacant parcels (many used for parking) interspersed with buildings or groups of buildings related to the area's historical development over time.

The Project Area developed at the historic crossroads of what became San Jose. The Los Gatos Creek and the Guadalupe River, where the Tamien Ohlone-speaking tribal groups settled, forms the eastern spine, and The Alameda (present-day W. Santa Clara Street), which linked the Spanish colonial pueblo (Pueblo de San José de Guadalupe) to the east and mission (Santa Clara Mission) to the west, forms the crosspiece. By the late nineteenth century, its mixed-use character was in place, with small cottages, often with an adjacent tank house, abutting industrial development, including a gas works, fruit processing facility, and lumberyards. Smaller businesses, such as a livery, foundry, and a windmill manufacturer, reflect the typical services of the era. By this time, the Southern Pacific Railroad tracks form the western spine. The development pattern continued through the early twentieth century, with Pacific Gas and Electric Company (PG&E) acquiring and expanding the gasworks and substation and large laundry facilities providing employment for local residents. By the 1930s, several canneries and fruit processing plants had been established, reflecting the prominent role the fruit industry played in the local economy. The prominent Southern Pacific Railroad station (present-day Diridon Station) had also been constructed, attesting to the continued dominance of rail transit. The character of the project area began to transition in the postwar era as numerous light industrial properties replaced older residences. Closing out the century, the SAP Center supplanted the former PG&E gasworks, buildings gave way to new parking lots, and construction of the Guadalupe River Park began in the 1990s. The present-day built environment in the project area reflects nearly every phase of development, while retaining its mixed-use character established over a century-and-a-half ago.

The attached maps provide summary information regarding existing buildings and previously identified historic resources within the Study Area. The Development Chronology map shows that existing development within the Project Area ranges in date of construction from the late nineteenth century to the late twentieth century. The Historic Resources Map shows previously identified historic resources within the Study Area. These resources include locally-listed historic districts (Lakehouse, River Street) and several locally notable Structures of Merit and Identified Structures. The Diridon Station (with associated features) is listed in the National Register of Historic Places. A number of properties within the Project Area retain a high degree of integrity and require further investigation to determine if they qualify as historic resources under CEQA. ARG will prepare or update historic assessments for all properties over 45 years of age within the Project Area as part of the environmental review process for the proposed project. ARG and the project team welcome input from city staff and the Historic Landmarks Commission regarding existing and potential historic resources within the Study Area.
