Hi Kevin:

We are not sure what you envision to accomplish at today's 4PM call but we thought we would suggest an Agenda:

1. Further discussion of San Jose's interconnection to the PG&E 115kv transmission system: a) assume flip flop (less expensive) arrangement on Google supplied land; b) assume 25.5 MW of load c) do we claim that this is an alternative to the Google application?/what do we expect from Google as a confirmation? d) do we wait for a PG&E supplied cost to Google to go above 25.5 MW?
2. Status of SO6 revision.
3. Any initial thoughts on SO7 scope?
4. Elements of the Google Project Principals for the first San Jose draft to share with Google : a) Does Google get reimbursed for capital costs of the substation and distribution system at Commercial operation? b) Does San Jose ask for the right to serve San Jose load outside the Project boundaries from the constructed distribution system? c) What about the treatment of storage and solar generation?

Thanks, Barry

Subject: Interconnection Application

Hello Barry, Doug and Mike.

Google asked that we cancel this Wednesday's Energy Working Group meeting to allow our teams some additional time to work on the topics we've been discussing. I'd like to keep the hour available for us to further discuss our strategy related to the interconnection application and the components of a future agreement.

I will send you a separate meeting invitation for tomorrow from 3-4. Please let me know if that still works.
