Subject: Re: Waste Conveyance System

Hi Julie,

The discussion I had way back when was a waste processing plant in the complex to convert trash to energy. The Video I just watched is a trash collection system transporting the trash to be processed elsewhere. I guess we need to get to what are they really thinking about doing. This conveyance/collection (storage) system is just a relatively easy discussion (for Fire Dept) about fire suppression design. A waste processing plant within the complex is a far more complex discussion. Ray

Subject: Waste Conveyance System

Hi Ray and Hector,

It was nice meeting you today. Here's a video that is an example of the type of waste conveyance system that Google is considering for its new development - <https://www.envacgroup.com/>. You can see a demonstration video here - <https://www.youtube.com/watch?v=iRzOhPHz6zM>.

As I mentioned to you, ESD-IWM included a comment on their submittal that they should work with Fire Dept staff on any access, fire, and safety concerns. If you think you'd like to at least be an "optional" for my District System team meetings (which cover the district wastewater, stormwater, waste, and energy systems their considering), let me know and I can forward the invite. Otherwise, I'll plan to connect with you/your point person on any relevant items I come across.

Including Jackie in this email as a FYI too. Let me know if you have any questions. Thanks.

Julie Benabente
