Hi Julie,

I have yet to see these plans. I think Emy requested to see them, without any response back (is that still correct Emy?). I'll look into this ASAP, but definitely won't have anything for you by 10/28.

**Subject:** Review of "Downtown West Mixed-Use" Application  
**Importance:** High

Hi there,

I'm sending this email to try to coordinate the two separate processes that are at play around the Google development review. We've been having regular district systems meetings on the development and now the submitted application is going through the City's standard development review process (with some reviewing staff not having been part of previous conversations and some staff on the district system team not included as reviewers). Also, those who received the project for review aren't all in the loop on the expected due dates listed below (other than the standard 30-day one, Nov. 8).

Here's my understanding in terms of review/comments being drafted for the Downtown West Mixed-use project application that was submitted (<http://www.san Joseca.gov/GoogleProject>):

1. Sanitary/Wastewater, Stormwater Utilities - Vivian (lead, PW); **Jennifer**, do you also review for your dept.?
2. Stormwater - Jeff S. (lead, ESD/Stormwater)
3. Waste - Peggy Horning (lead, ESD/IWM, taking over for Emy Mendoza)
4. Energy - no standard reviewer; **Mark/Zach** - can you take a look at the submittal and see if you have any comments?
5. Recycled Water - no standard reviewer; **Jeff P.**, can you take a look at the submittal and see if you have any comments?

**All, please share the high-level comments that you're submitting on 10/28 and the final versions on 11/4 with the rest of the people on the email just to make sure we're coordinated.** Thanks!

-Julie

**Subject:** DSA Team check-in

Hello Team,

Just checking in about the 30-day letter, to make sure we're on the same page and all in the loop.

So, Planning is coordinating a 30-day letter for the Google project – due November 8<sup>th</sup>. Please coordinate within your departments on the comments to ensure consistency with the discussions to date, and send them to John and James. The Core team will review the letter before sending to Google, and would like to see the initial, high-level comments by October 28 and final memos by November 4. (DOT got their initial list in – gold star!) We plan to spend some time at the DSA All Hands meeting on Nov 4 going over the comments.

The application is available for download here: <http://www.sanjoseca.gov/GoogleProject>.

**John/James** – please let the group know if there is anything else I'm missing or needs correction.

Thanks!

Lori

### Site Area

	Proposed <sup>1</sup>
Buildable Area	42.9 ac
Open Space and Setbacks <sup>2</sup>	16.8 ac
Other <sup>3</sup>	24.7 ac
Total	84.4 ac

#### NOTES:

- All site areas are approximate, and rounded to the nearest 0.1 acre.
- Open space includes all proposed parks, plazas, green spaces, mid-block passages, and riparian setbacks
- Other category includes new and existing streets, existing rail, and non-developable buffers to infrastructure

### Project Description

The Diridon Station Area Plan (DSAP) adopted by the City of San José in 2014 establishes a long term goal of creating a vibrant mixed-use urban destination adjacent to a new intermodal transit station to support the City's employment growth policy. While acknowledging the fundamental importance of transit infrastructure, the DSAP emphasizes the importance of experiential qualities that would enhance both the local area as well as broader San José by creating:

- A local and regional destination.
- A lively public realm fostering walking, biking and transit integrated with a variety of public spaces.
- Distinctive architecture and civic spaces that reflect Silicon Valley's spirit of innovation and San José's rich history.
- A strong sense of place as an identifier for San José as the center of Silicon Valley, the capital of the technology world.

This application for the redevelopment of approximately 80 acres of the DSAP area's 240 acres seeks to build upon and implement the DSAP's vision, while recognizing evolving realities and aspirations since its original adoption.

The Downtown West Mixed-Use Project (Downtown West) proposes the construction of approximately 6,500,000 gross square feet (GSF) of office space (with a maximum of 7,300,000 GSF), including approximately 1,000,000 GSF on the previously entitled San José Water Company Building site east of Los Gatos Creek; approximately 3,000 to 5,000 units of housing (with a maximum of 5,900 units); approximately 300,000 to 500,000 GSF of active uses, which may include retail, cultural, arts etc.; approximately 100,000 GSF event space; hotel use and limited-term corporate accommodations; on-site utilities and approximately 15 acres of publicly-accessible open space. This application describes the location and distribution of these proposed land uses, the components and arrangement of the conceptual framework that organizes them, and the utility and mobility infrastructure that enables and serves them.

### Development Program

Uses	Existing <sup>1</sup>	Proposed <sup>1</sup>
Residential Units	11	3,000 - 5,000 (max. 5,900)
Office GSF <sup>2</sup>	151,000	6,500,000 (max. 7,300,000)
Light Industrial GSF	418,000	-
Commercial/Active Uses GSF <sup>3</sup>	11,000	300,000 - 500,000
Hotel Rooms	-	up to 300
Limited-Term Corporate Accommodations (Rooms)	-	up to 800
Event Center GSF	-	100,000
Central Utilities Plant (District Systems) GSF	-	115,000
Logistics/Warehouse GSF	-	100,000
Parking		
Public and/or Commercial Parking <sup>5</sup>	N/A	600 - 2,800
Residential Parking (up to 0.4 stalls / unit)	N/A	up to 2,360
Total Parking (stalls)	N/A	up to 5,160

#### NOTES:

- All proposed gross square feet (GSF) is rounded to the nearest 100,000. All existing GSF is approximate.
- Approximately 150,000 - 200,000 of Office GSF could become standalone ancillary office amenity space
- Active uses include a variety of uses, including but not limited to retail, restaurant, arts, cultural, institutional, educational, nonprofit, and small-format office uses.
- Limited-term corporate accommodations would operate akin to a suites hotel that would accommodate Google employees typically visiting the site for 1 to 4 days. It would not be open to the public.
- A small amount of employer parking is anticipated for uses such as expectant mother parking, accessible parking, and similar uses.

Project Description  
Downtown West Mixed-Use Plan

10/10/2019

Project Boundary

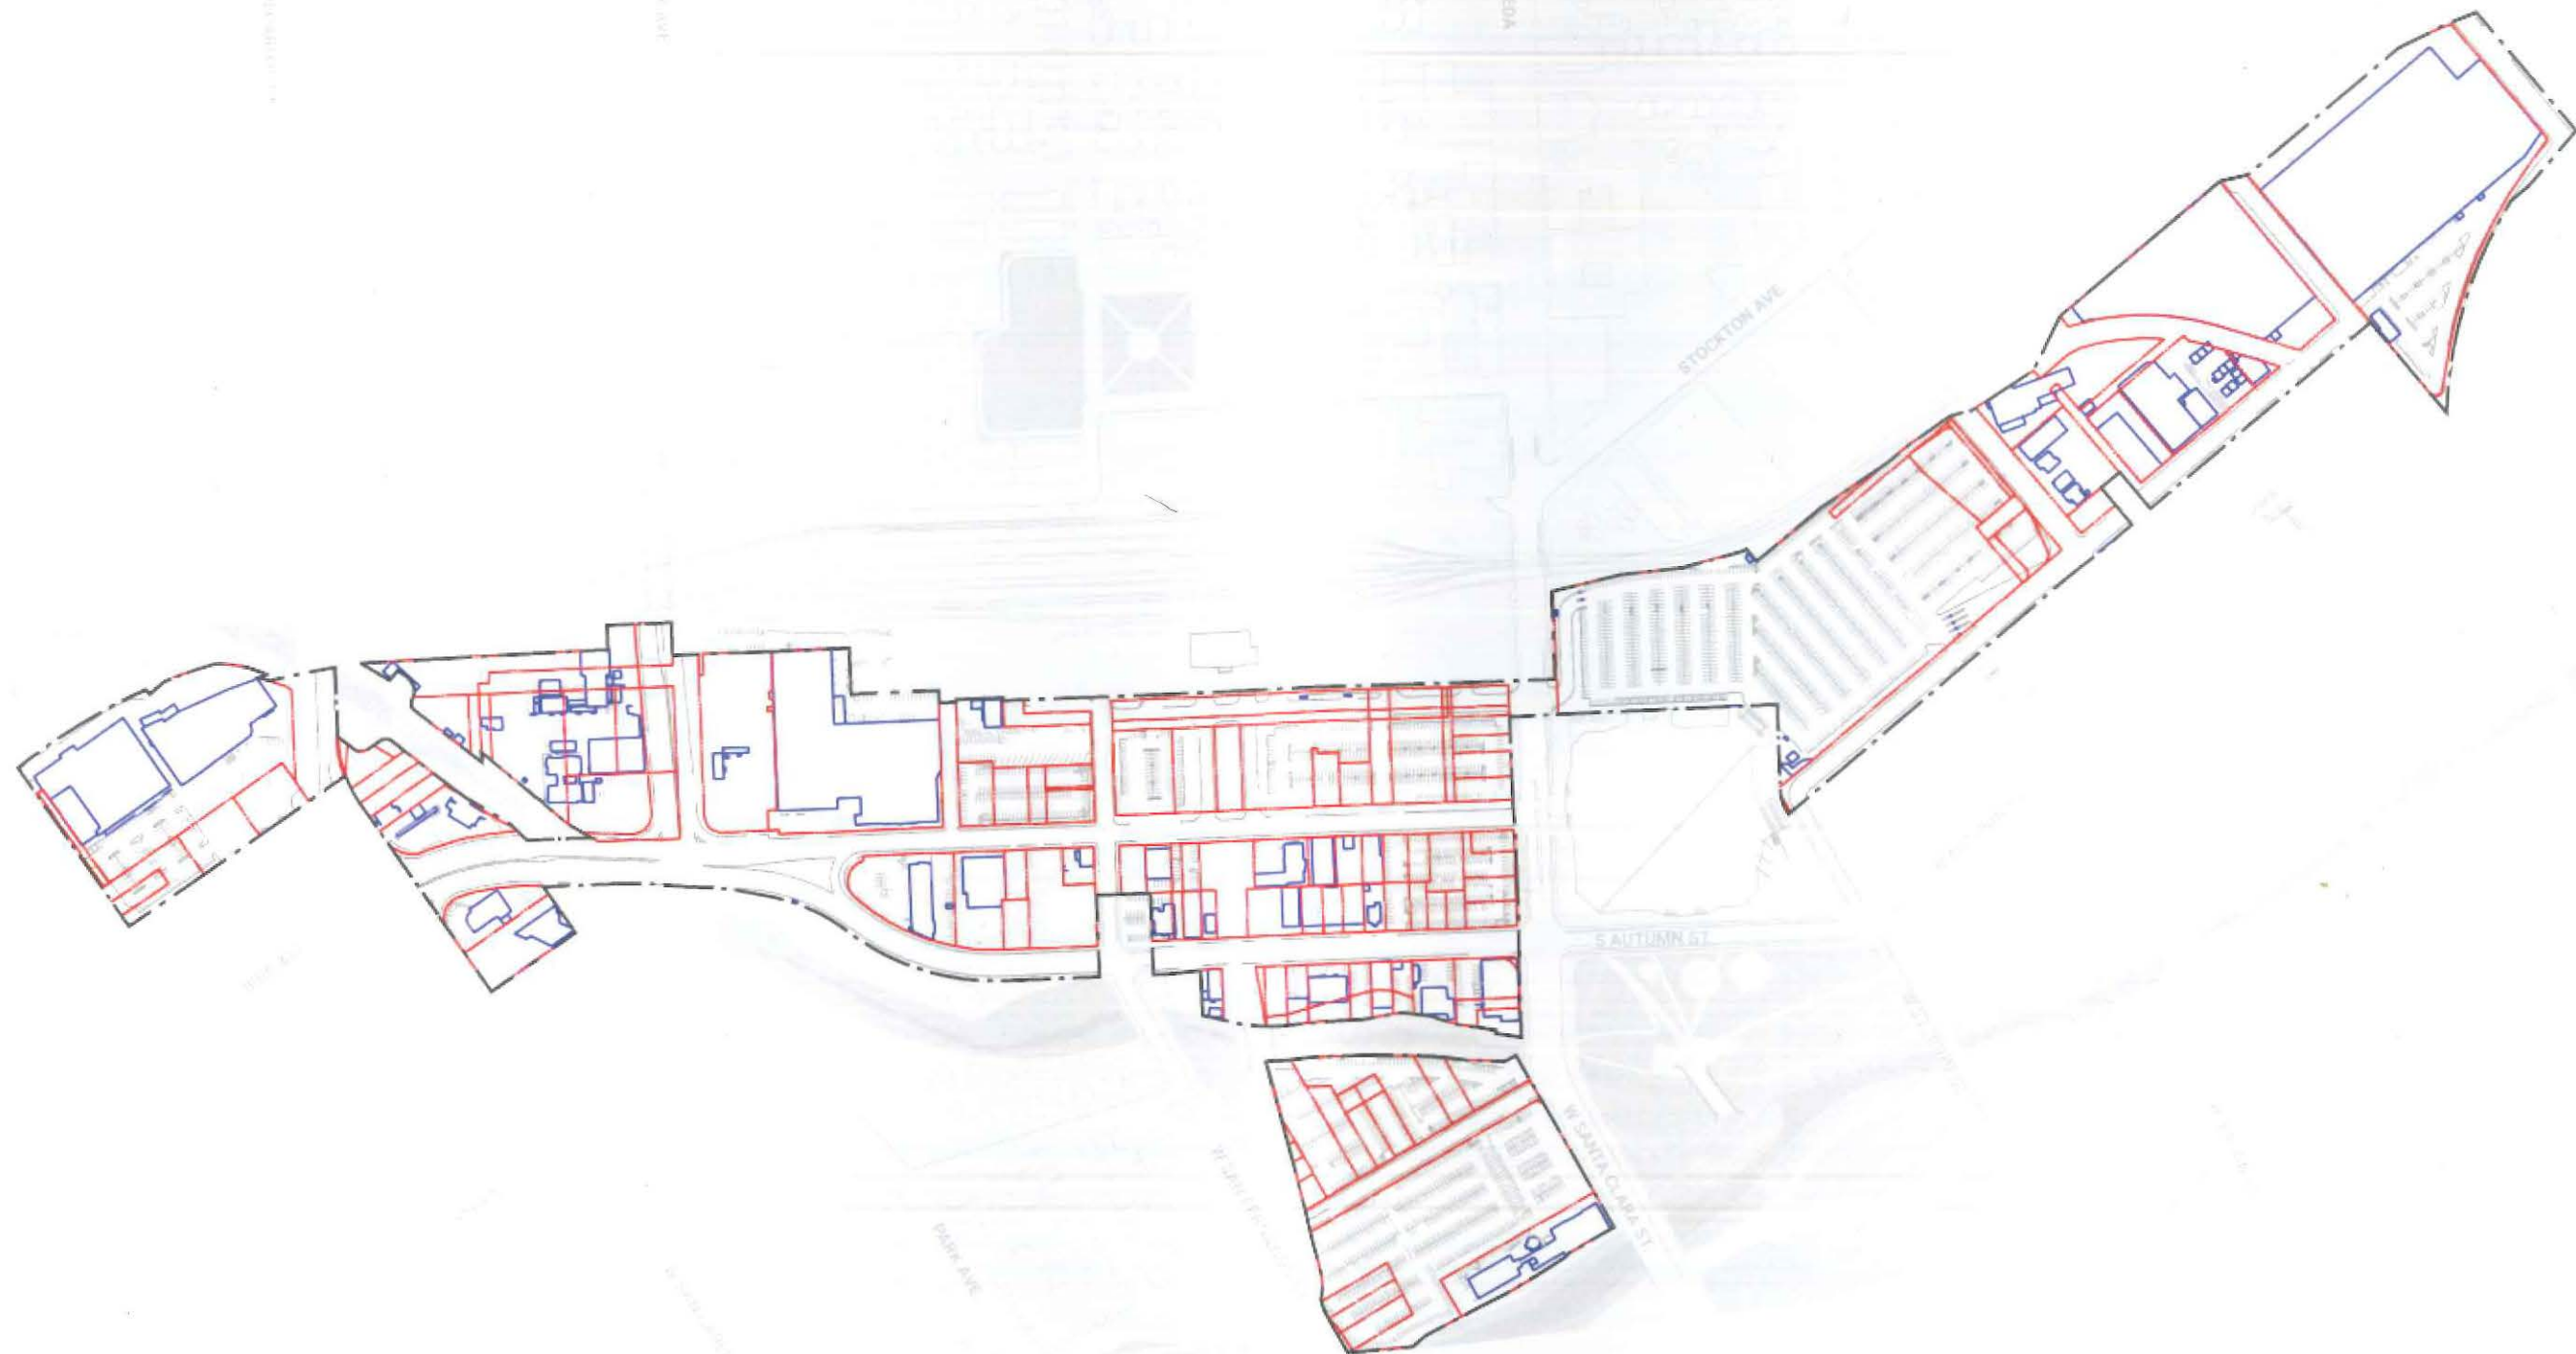

The project site consists of approximately 80 gross acres and is generally bounded by Lenzen Avenue and the Union Pacific railroad tracks to the north; North Montgomery Street, Los Gatos Creek, the Guadalupe River, South Autumn Street, and Royal Avenue to the east; Auzerais Avenue to the south; and Sunol Avenue and Diridon Station and the Caltrain rail tracks to the west. The project also includes the area generally bounded by Los Gatos Creek to the west. San Fernando Street to the south, the Guadalupe River to the east, and Santa Clara Street to the north. The site is approximately one mile in length from north to south and generally less than 800 feet in width from east to west — although at its widest, just south of West Santa Clara Street, the site extends nearly 1,500 feet from east to west.

## Project Foundation

Years of public outreach and City efforts to develop the Diridon Station Area culminated in the approved DSAP in 2014 and the subsequent Memorandum of Understanding between the City and Google (MOU) in 2018. Building on this foundation, the project — a subarea predominantly within the DSAP — seeks to implement the vision of a new integrated part of Downtown San José at Downtown West. The MOU between the City of San José and Google identifies several key planning objectives:

- Optimize density and its mix of uses
- Increase housing
- Be designed for human scale
- Enhance and connect the public realm
- Achieve excellence in design
- Maximize use of public transit and minimize parking
- Pursue excellence in transit access and operations
- Provide high levels of sustainability

Building on a decade of City-led engagement starting in 2009, the Downtown West Mixed-Use Project sought additional input in 2018-2019. The feedback reinforces the MOU goals and formed a better understanding of the community's design priorities, most notably:

- Create jobs near transit
- Provide housing alongside jobs
- Connect people to nature and transit
- Build a place that is of San José

## Design Standards and Guidelines

As part of the proposed project, the project applicant, in coordination with the City, will develop detailed design standards and guidelines to govern development on the project site. The standards and guidelines would apply to building design, land coverage, density, setbacks, open space character, and the public realm, along with other design controls for development. Specific controls could include:

- Maximum lot dimensions, building siting and orientation; ground-floor uses and access;
- Building bulk and mass; minimum tower separation; solar access and shading;
- Design and activation of publicly accessible spaces; ecological principles;
- Open space programming and landscaping design intent; and
- Circulation, streetscape and access.

Standards would set forth measurable prescriptive or performative design performance criteria. Guidelines set forth design intent, design expectations, and encouraged or discouraged features which are more qualitative and subjective in nature. Together, the standards and guidelines would balance flexibility to allow for innovation and evolution with confidence in the delivery of high quality buildings and public realm. Subsequent plans would be evaluated by the City for consistency with this Project Application and the standards and guidelines within the Design Guidelines document.

**01**  
**Create jobs near transit**

**Make the Diridon Station Area a job center**

**Add economic vitality to San José's downtown**

**Enhance the property tax and economic base**

**02**  
**We need housing alongside jobs**

**3,000-5,000 housing units vs. 2,588 housing units across DSAP**

**Optimize affordable housing through the project and public benefits**

**+ Affordable housing fund: Google's \$250M investment for Bay Area + \$50M homelessness and anti-displacement grants**

**03**  
**Create opportunity pathways**

**A job training and business opportunity center pre-construction**

**A learning and career opportunity ladder from retail, to food, to tech jobs**

**An ecosystem model for retail and small, women + minority owned businesses**

**04**  
**Build a place that is of San José**

**50/50 site area of office to other uses**

**An extension of the City, not an office park. A place for all San Joséans**

**05**  
**Create a place that connects people to nature + transit**

**Create a cohesive place that is people centric, not car centric**

**Connect people to nature along the creek and river**

**Connect surrounding neighborhoods**

**Climate positive**

**06**  
**Better together**

**Partnership models for learning, local retail and the arts**

**Develop economically replicable solutions**

**Co-create a vibrant public realm**

2.04.1 Objectives for the Project

# 2.04

## Design Concept Narrative Downtown West Mixed-Use Plan

10/10/2019

### Local and Regional Connections — to Transit, and Nature

Located at the transit gateway to San José as well as the natural confluence of Los Gatos Creek and the Guadalupe River, Downtown West serves as the portal to San José's rich cultural and ecological roots. This extension of Downtown San José seeks to bring jobs near transit combining the density and variety of an urban core with an incredibly rich natural environment, offering a work environment accessible to the region and nature. The project centers around enhanced connectivity — locally, along priority east-west streets linking neighborhoods west of Diridon to the Downtown Core — and regionally, completing a north-south ecological spine along the riparian edge that will connect neighborhoods south of I-280 to the Downtown Core along Los Gatos Creek.

### Built on Context and Character

The foundation of Downtown West builds upon San José's rich cultural history, vibrant character, and innovative spirit. The mile-long site will utilize context to cultivate three distinct characters of place — ranging from industrial and active entertainment in the north; civic, transit-oriented, and authentic district character in the core; and neighborhood-serving and trail connections in the south.

The land use distribution of the project seeks to align with existing residential neighborhoods, particularly east of Los Gatos Creek, while office uses are focused along the predominantly-industrial rail edge and adjacent to the Downtown Core. Active uses including retail, cultural, educational and small businesses are located in greatest concentration at the core of the project to strengthen the existing cultural links from the Diridon Station to the Downtown Core.

### People First — Pedestrians and Cyclists

Downtown West will be people-centric, not car-centric. In a world of evolving personal transportation modes — or "micro-mobility" — streets throughout Downtown West are designed with generous sidewalks, meandering off-street paths, protected bike lanes, and traffic calming which support both safe commuter and recreational movement. Priority improvements are aimed to mend the mobility gaps and realize the City's connectivity goals envisioned in the DSAP and Better Bikeways Plan.

The robust public realm network throughout Downtown West links together a variety of open spaces located typically within a block from any location within the project. Parks and plazas are strategically positioned at key connections and near existing adjacent neighborhoods.

### Diverse and Open

Over half the site area will be devoted to housing, open space, arts, retail, and community uses to broaden the uses, users, and activities throughout the day. Co-created programs and partnerships with local organizations, institutions and small businesses will bring the project to life and ensure that Downtown West is not just for San José, but of San José.

The mixed-use core of Downtown West will become a civic heart at San José's doorstep — including a sequence of varied experiences from station to creek and through Downtown along new public plazas, creekside ecology, and a mix of new and old low-scale buildings carved through the high-density urban core.

## Varied Experiences at the Creek

## World-class multi-modal transit hub

## Local neighborhoods with diverse character and community

## A new part of Downtown San José, Mixed Use and Connected

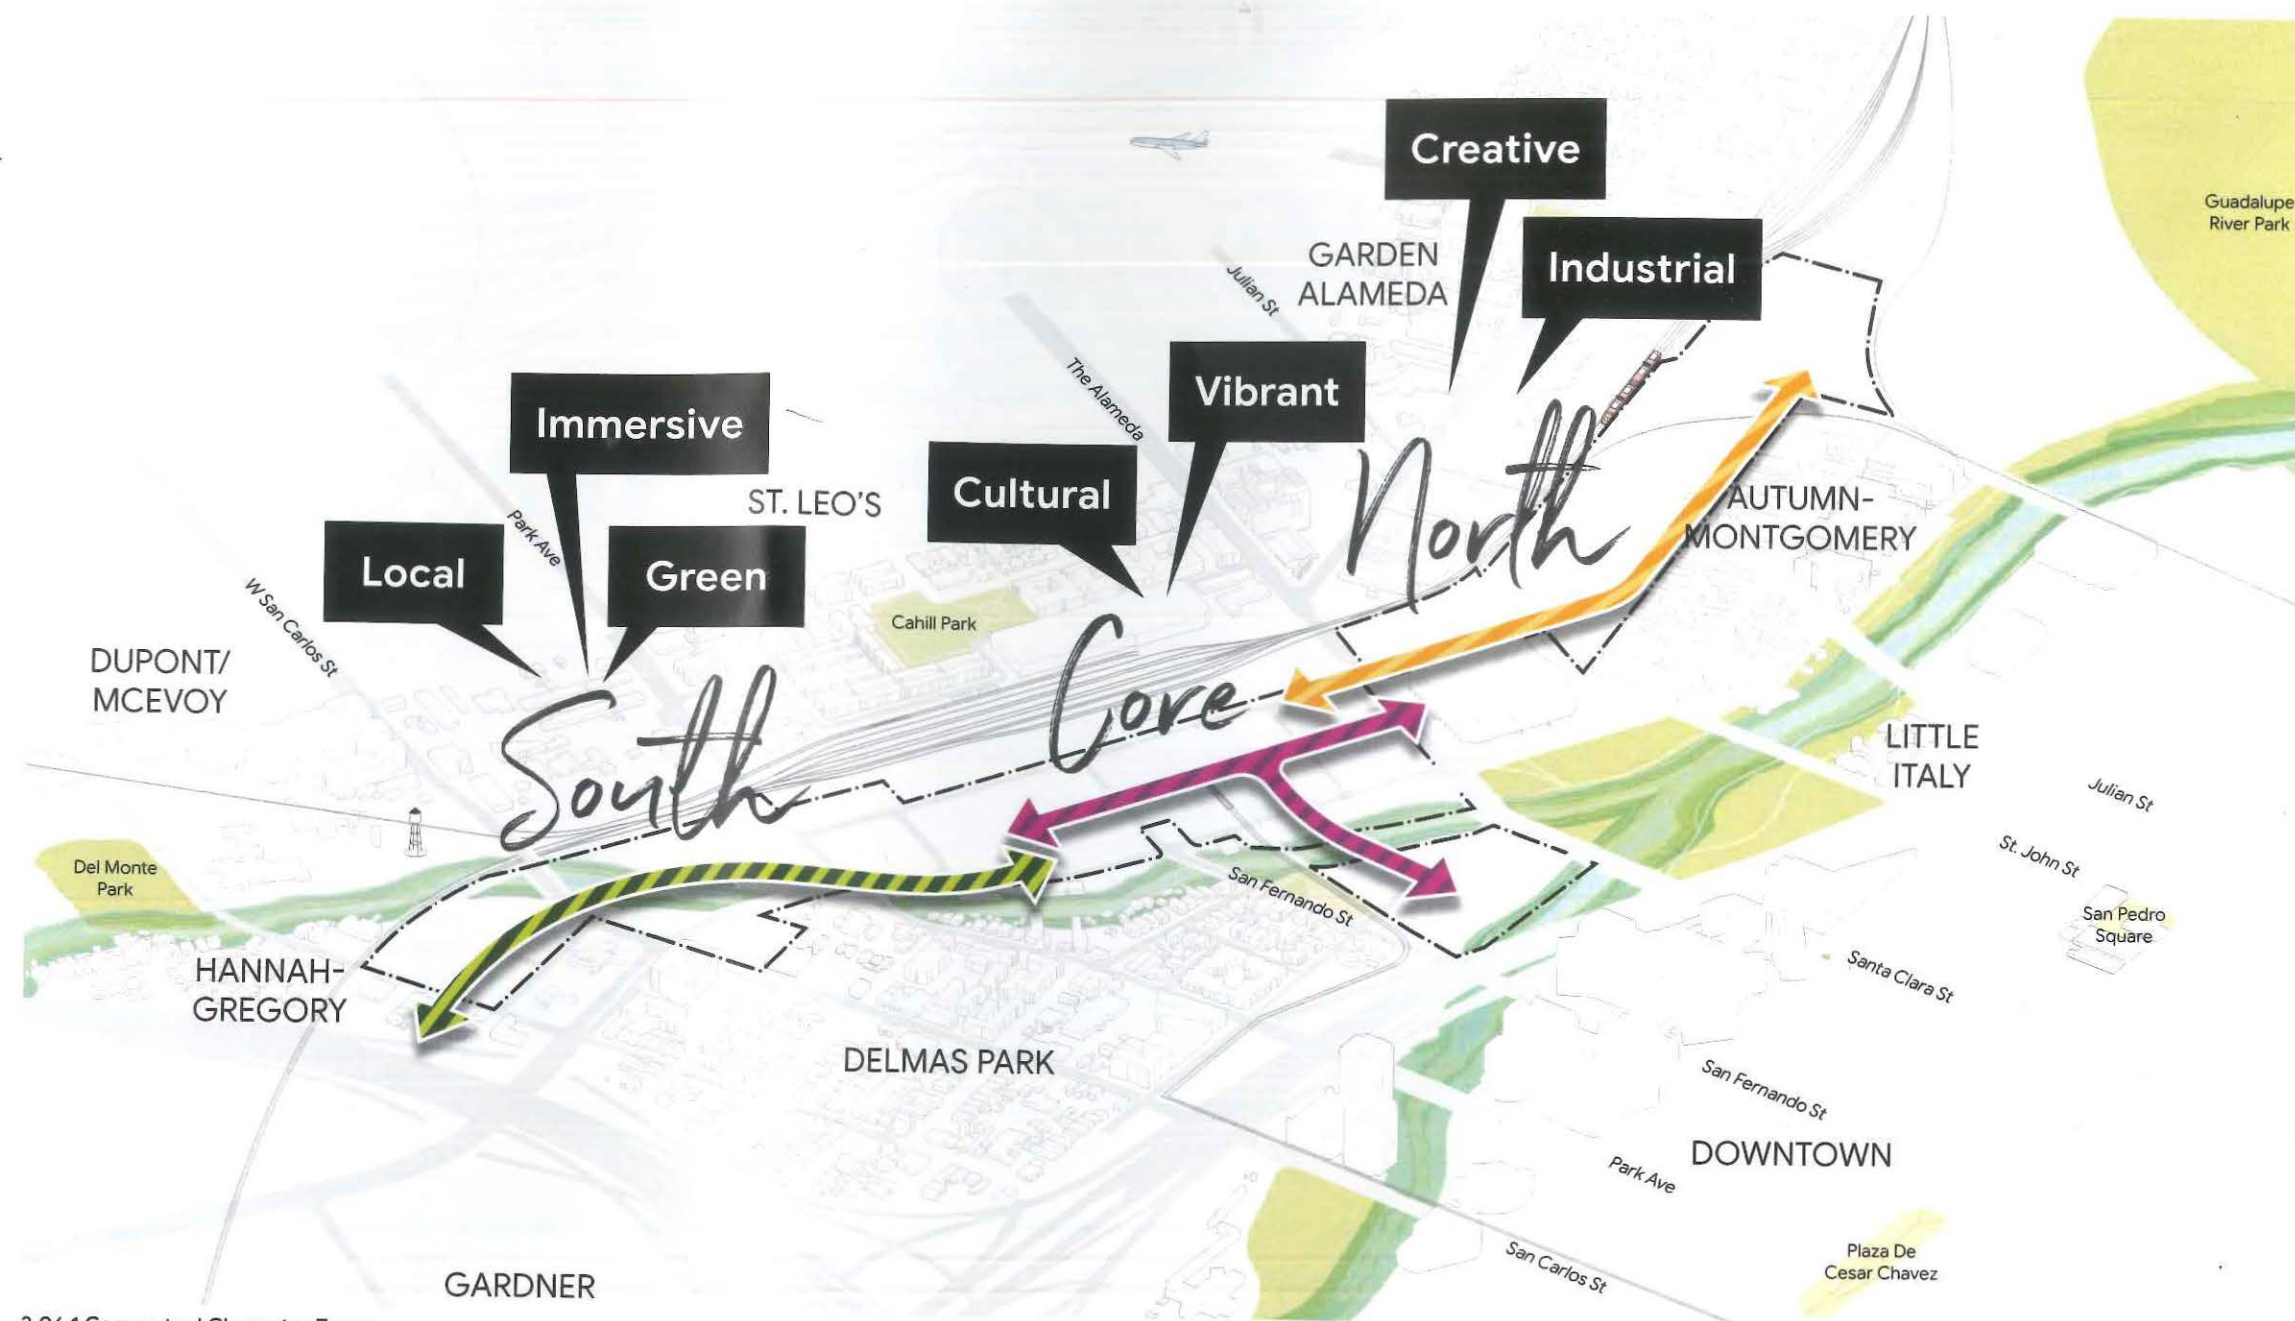

2.05.1 Experience Drivers

## Three Character Zones

The foundation of this framework builds upon San José's rich cultural history, vibrant character, and innovative spirit. The mile-long site will utilize context to cultivate three distinct characters of place — ranging from industrial and active entertainment in the north; civic, transit-oriented, and authentic district character in the core; and neighborhood anchored in ecology in the south.

The land use distribution of the project seeks to align with existing residential neighborhoods, particularly east of Los Gatos Creek, while office uses are focused along the predominantly industrial rail edge and adjacent to the Downtown Core. Active uses — including retail, cultural, educational and small businesses — are located in greatest concentration at the core of the project to strengthen the existing cultural links from the Diridon Station to the Downtown Core.

2.10.2 Block Plan

Legend

Zone Boundary

Note:

1. Location, dimensions and arrangement of open space, streets and pedestrian mid-block passageways are approximate and may change as vertical buildings are developed. Minimum standards will be defined in the Design Standards and Guidelines.
2. Block boundaries are subject to change.

# Existing Plan Land Use Designation

The General Plan 2040 (General Plan) land use designations within the project boundary include predominantly commercially-oriented land uses such as Commercial Downtown, Combined Industrial/Commercial and Transit Employment Center, prohibiting residential uses. Additionally, Public/Quasi-Public and Open Space land use designations prohibit development altogether. A ballpark was envisioned in the DSAP between San Fernando Street and Park Avenue, but is not identified in the General Plan Land Use designations.

## 3.01

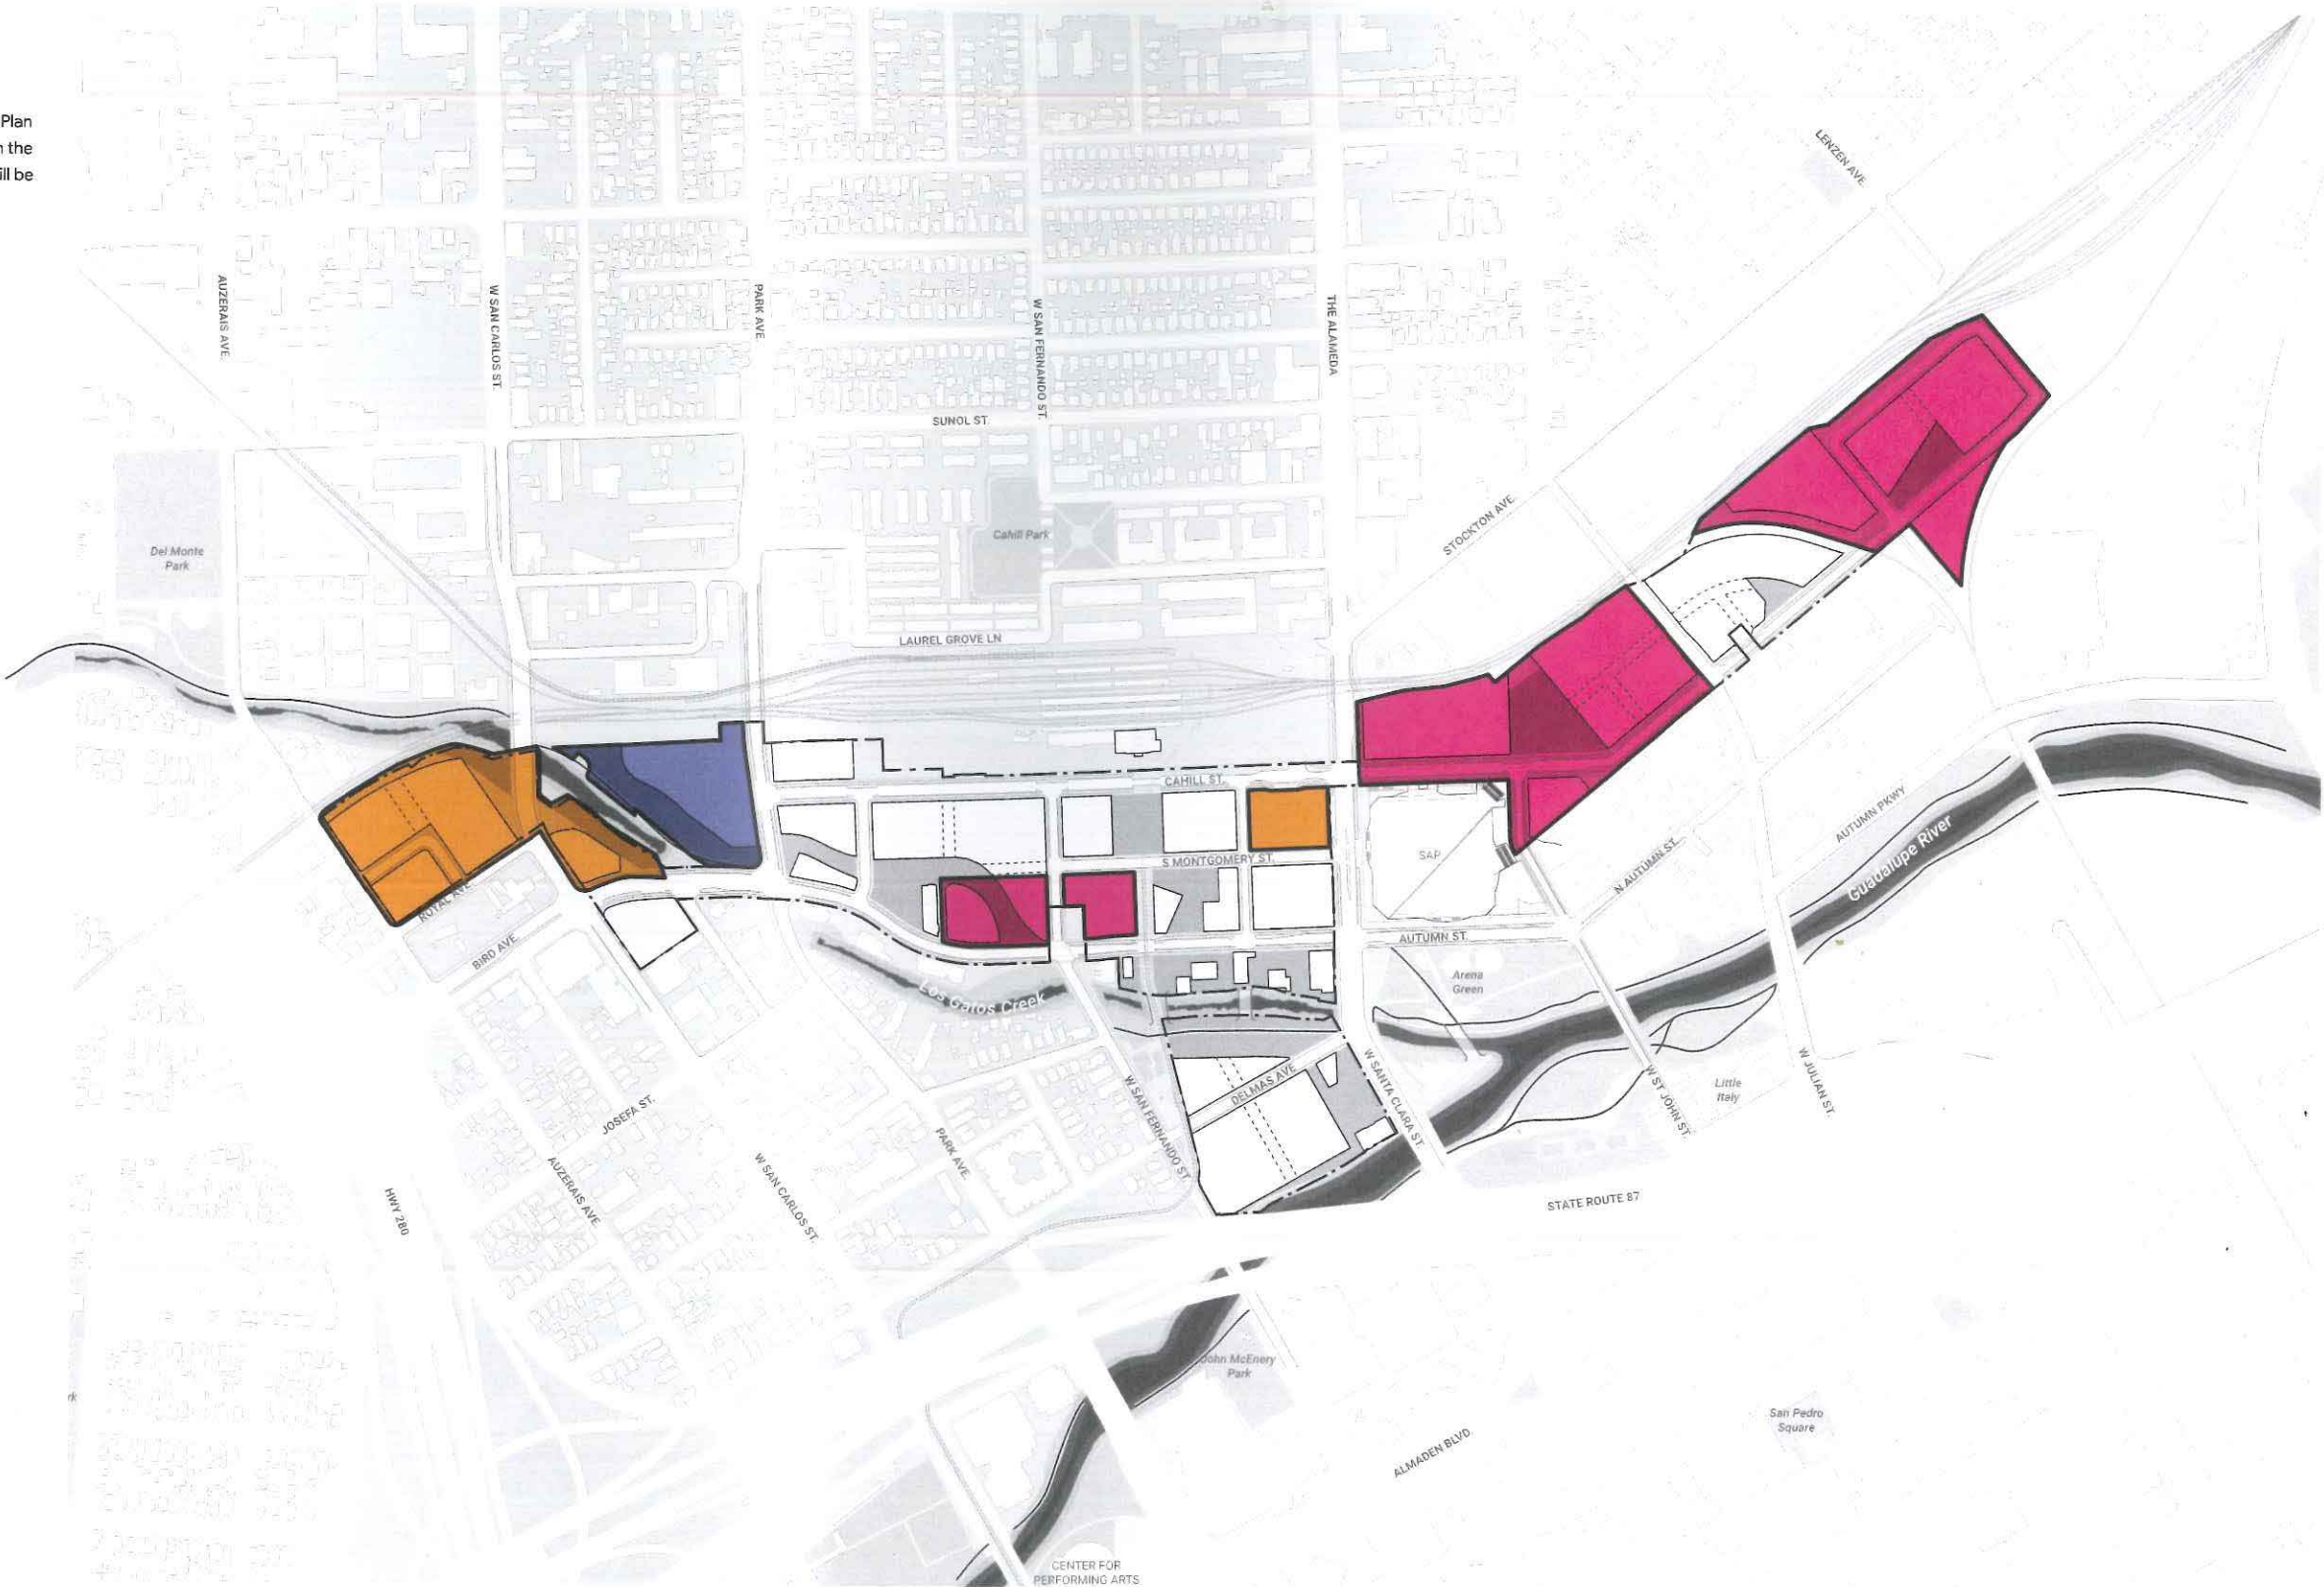

### Existing General Plan Land Use Designation Downtown West Mixed-Use Plan

10/10/2019

Proposed Changes to Existing Plan Land Use Designation

Figure 3.02.1 identifies areas throughout the plan that require amendments to the General Plan and DSAP land use designations to accommodate the mixed-use plan land uses pursued in the Downtown West Mixed-Use Project. The appropriate General Plan land use designations will be determined during the planning and General Plan Amendment process.

3.02.1 Proposed Changes to Existing General Plan Land Use Designations

**Note:**

1. Location, dimensions and arrangement of open space, streets and pedestrian mid-block passageways are approximate and may change as vertical buildings are developed. Minimum standards will be defined in the Design Standards and Guidelines.

**3.04**

## Maximum Heights

Existing height limits on the project range from 65 feet to 135 feet in the southern portion of the site; 130 feet in the site's central area; and 80 feet to 100 feet above ground level at the site's northern parcels. In March 2019, the San José City Council directed Planning Department staff to develop new height limits for portions of Downtown based on Federal Aviation Administration (FAA) regulations for aircraft operations at Mineta San José International Airport. Information presented to the Council indicated that height limits in the area west of SR 87, including the project site, could increase from the current range of 65 to 135 feet to 160 to 290 feet. The City of San José would implement height limit increases on the project site, as well as within the remainder of the DSAP area and elsewhere in Downtown through an amendment to the DSAP that Planning staff would facilitate independent of this project as part of the amendments to the current DSAP that Planning staff may request Council consider adopting in Fall 2020. The airport and the resulting FAA regulations would continue to govern maximum building heights. The existing pattern of lower height limits closest to the airport in the north gradually increasing in distance to the south would continue.

Downtown West Mixed-Use Plan

10/10/2019

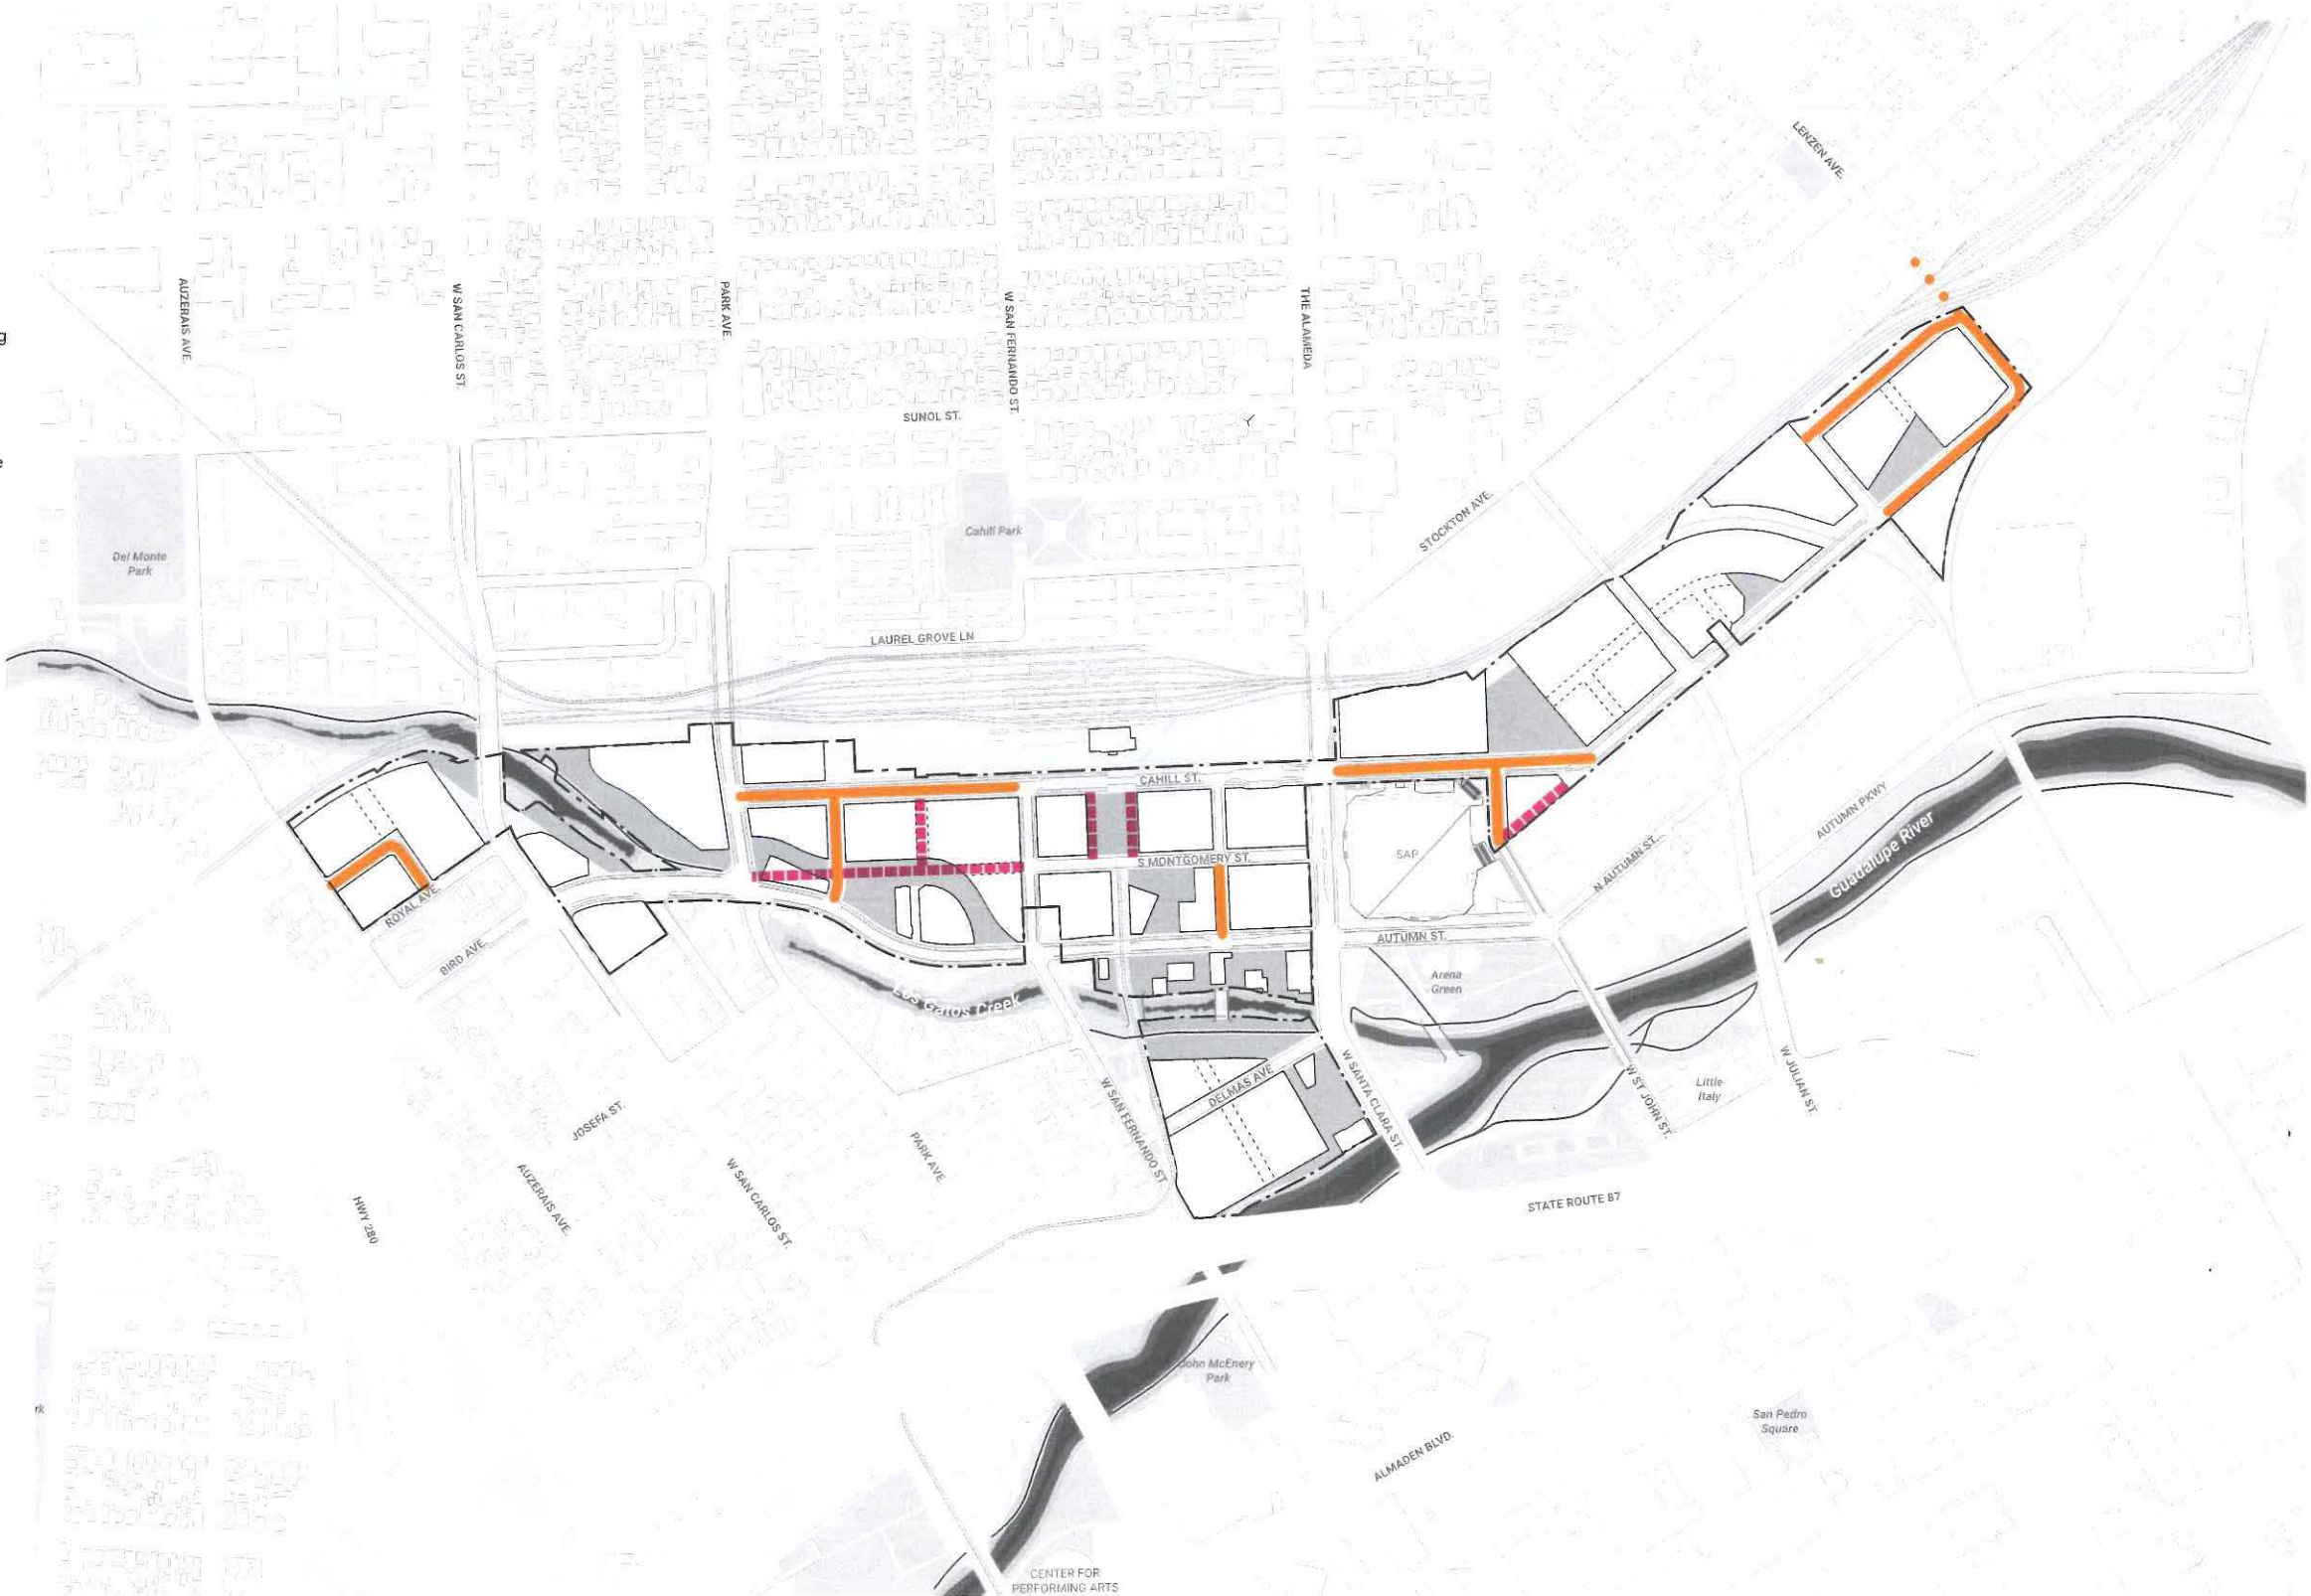

# Proposed Street Grid Changes

The project proposes to extend portions of certain streets and remove parts of other streets across the project area to establish a more complete grid in Downtown West (see Figure 2.09.1). Street additions may include:

- Extension of Cahill Street to North Montgomery Street in the north and to Park Street in the south to enhance north-south connectivity throughout the length of the project.
- Extension of West St. John Street to connect with the lengthened Cahill Street.
- Creation of two new east-west extensions between Cahill Street and South Autumn Street south - one south of West Santa Clara Street and one north of Park Avenue.
- Creation of a new "L-shaped" connection from Auzerais Street to Royal Avenue along existing alignments of Drake Street and Columbia Avenue.
- Potential expansion of emergency vehicle access into the project area north of the Union Pacific railroad tracks.
- Creation of many mid-block passages throughout project to facilitate pedestrian and bicycle access through the site and modulate the massing of larger blocks.

Street removals/relocations may include:

- Removal of North Montgomery Street between West St. John and Cahill Streets.
- Removal of South Montgomery Street between West San Fernando Street and Park Avenue, and Otterson Street west of South Montgomery Street.
- Removal of Crandall and Stover Streets east of the Diridon Station and increase of the existing open space at that location.

3.07.1 Proposed Street Grid Changes

- Legend
- Project Boundary
  - New Streets
  - - - Removed / Relocated Streets
  - ..... Conceptual Future Connection<sup>2</sup>

- Notes:
1. Location, dimensions and arrangement of open space, streets and pedestrian mid-block passageways are approximate and may change as vertical buildings are developed. Minimum standards will be defined in the Design Standards and Guidelines
  2. The connection at Lenzen Ave. is conceptual, and envisioned following the construction of elevated rail. Additional emergency vehicle access for parcels north of the Union Pacific railway are currently under study.

# Proposed Street Types

The street network is made up of four "Complete Streets" typologies, including:

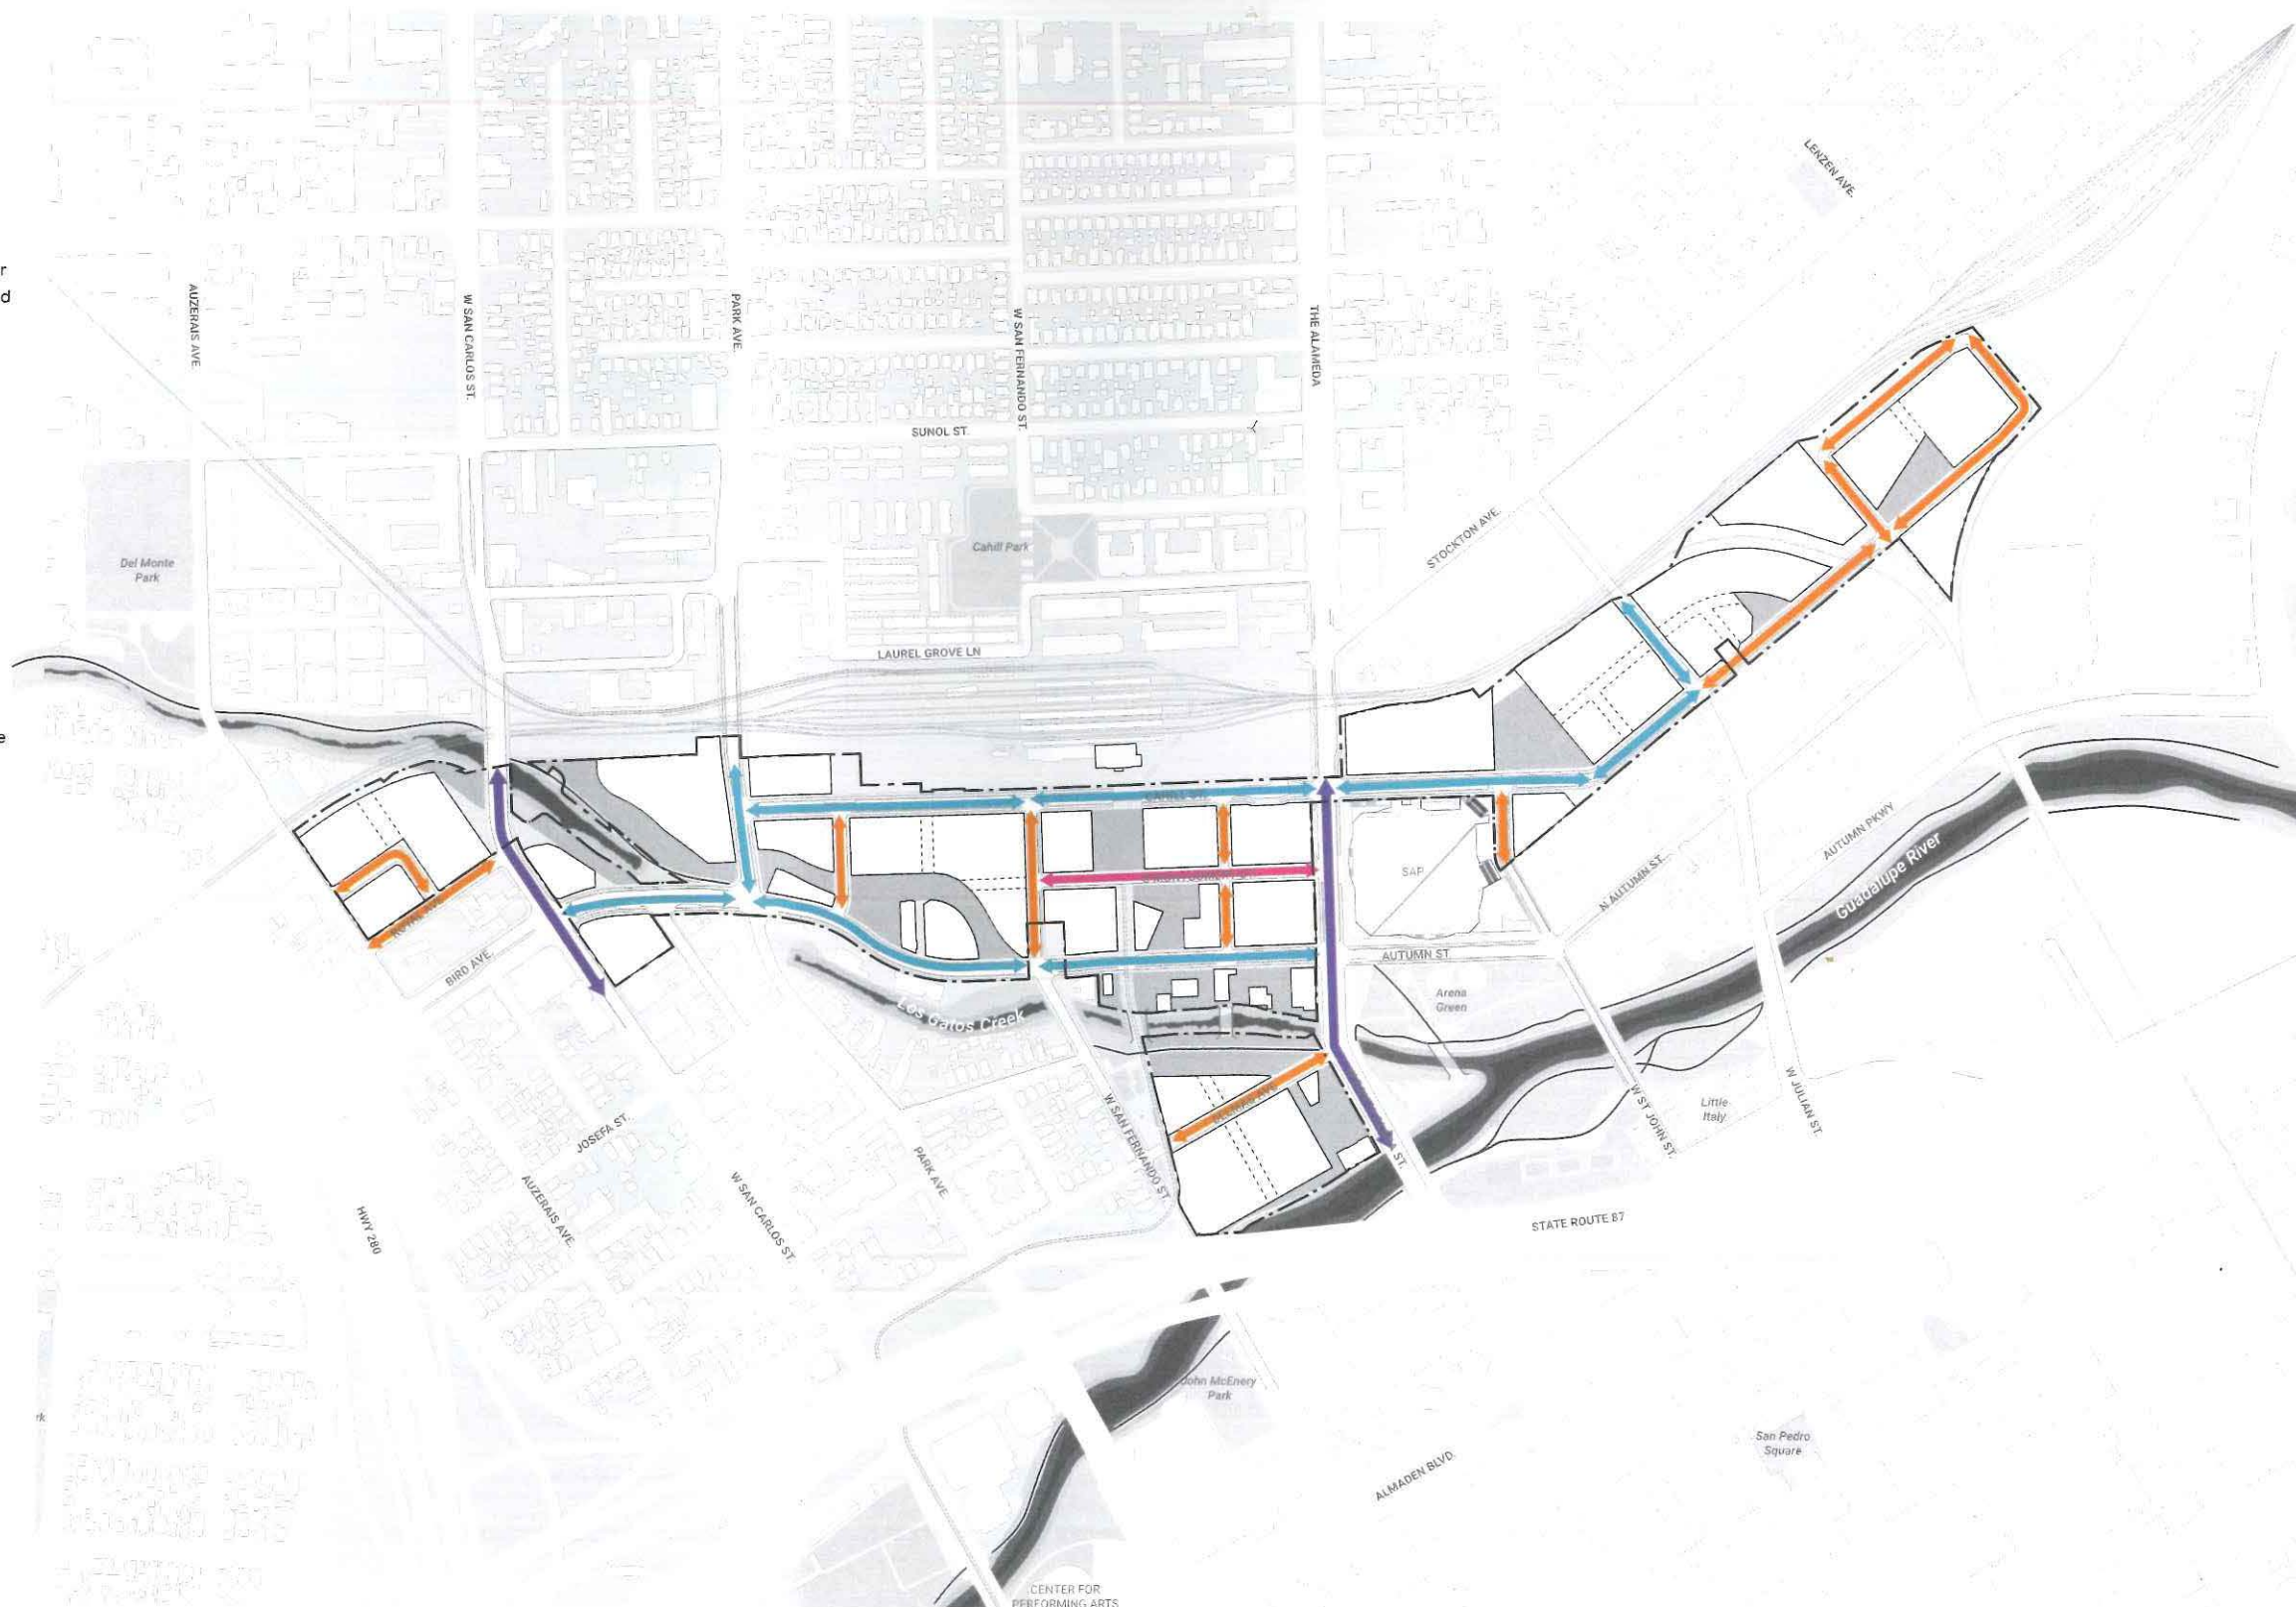

- Grand Boulevards - Transit Priority
- City Connectors - Bike and Pedestrian Priority with Transit Access
- Main Streets - Pedestrian Priority
- Local Connectors - Bike and Pedestrian Priority

Typical street sections on the following sheets reflect conceptual layout of all sections within or adjacent to the project boundary, where the Project will implement bike facility, streetscape and roadway improvements. "Flex lanes" identified in the sections are flexible space between the street curbs that may be used for parking, drop-off, loading, and travel lanes to support event traffic.

All sections are organized into typologies and represent typical conditions. While all streets generally align to the San Jose Complete Streets Guidelines, each section is unique to address context — including pedestrian and bike traffic, vehicular traffic, transit requirements, open space adjacencies, primary land uses, and ground floor activation. Unique street examples which deviate from the specific requirements of the typologies above include:

- Cahill Street and Autumn Street - City Connectors prioritizing low speed and transit accessibility, which are designed to be flexible over time.
- West Post Street - Local Connector alternative with widened one-way lane which allows for transit accessibility during construction phasing and special events. This unique street condition is intended to match the character of Post Street downtown.

Detailed streetscape standards and guidelines for the Project will be further refined with the City through the Design Guidelines process. Street section right-of-way total dimensions will be fixed, but allotment within may change.

## 3.08.1 Proposed Street Types

### Legend

- Project Boundary
- Grand Boulevard - Transit Priority
- City Connector - Bike and Pedestrian Priority with Transit Access
- Main Street - Pedestrian Priority
- Local Connector - Bike and Pedestrian Priority

### Notes:

1. Location, dimensions and arrangement of open space, streets and pedestrian mid-block passageways are approximate and may change as vertical buildings are developed. Minimum standards will be defined in the Design Standards and Guidelines
2. The connection at Lenzen Ave. is conceptual, and envisioned following the construction of elevated rail. Additional emergency vehicle access for parcels north of the Union Pacific railway are currently under study.

  - City Connector - Bike and Pedestrian Priority with Transit Access
  - Main Street - Pedestrian Priority
  - Local Connector - Bike and Pedestrian Priority

- Notes:
- Location, dimensions and arrangement of streets are approximate within the defined Right of Way width. Minimum standards, streetscape character and furnishings will be defined in the Design Standards and Guidelines.
  - All streets and buildings are subject to conformance requirements of the Americans with Disabilities Act (ADA)
  - Flex lanes identified in sections may be used for parking, drop-off, loading, and travel lanes to support event traffic. Flex lanes in typical streets can change to bicycle lanes. Example: Julian St. and Auzerals Ave.

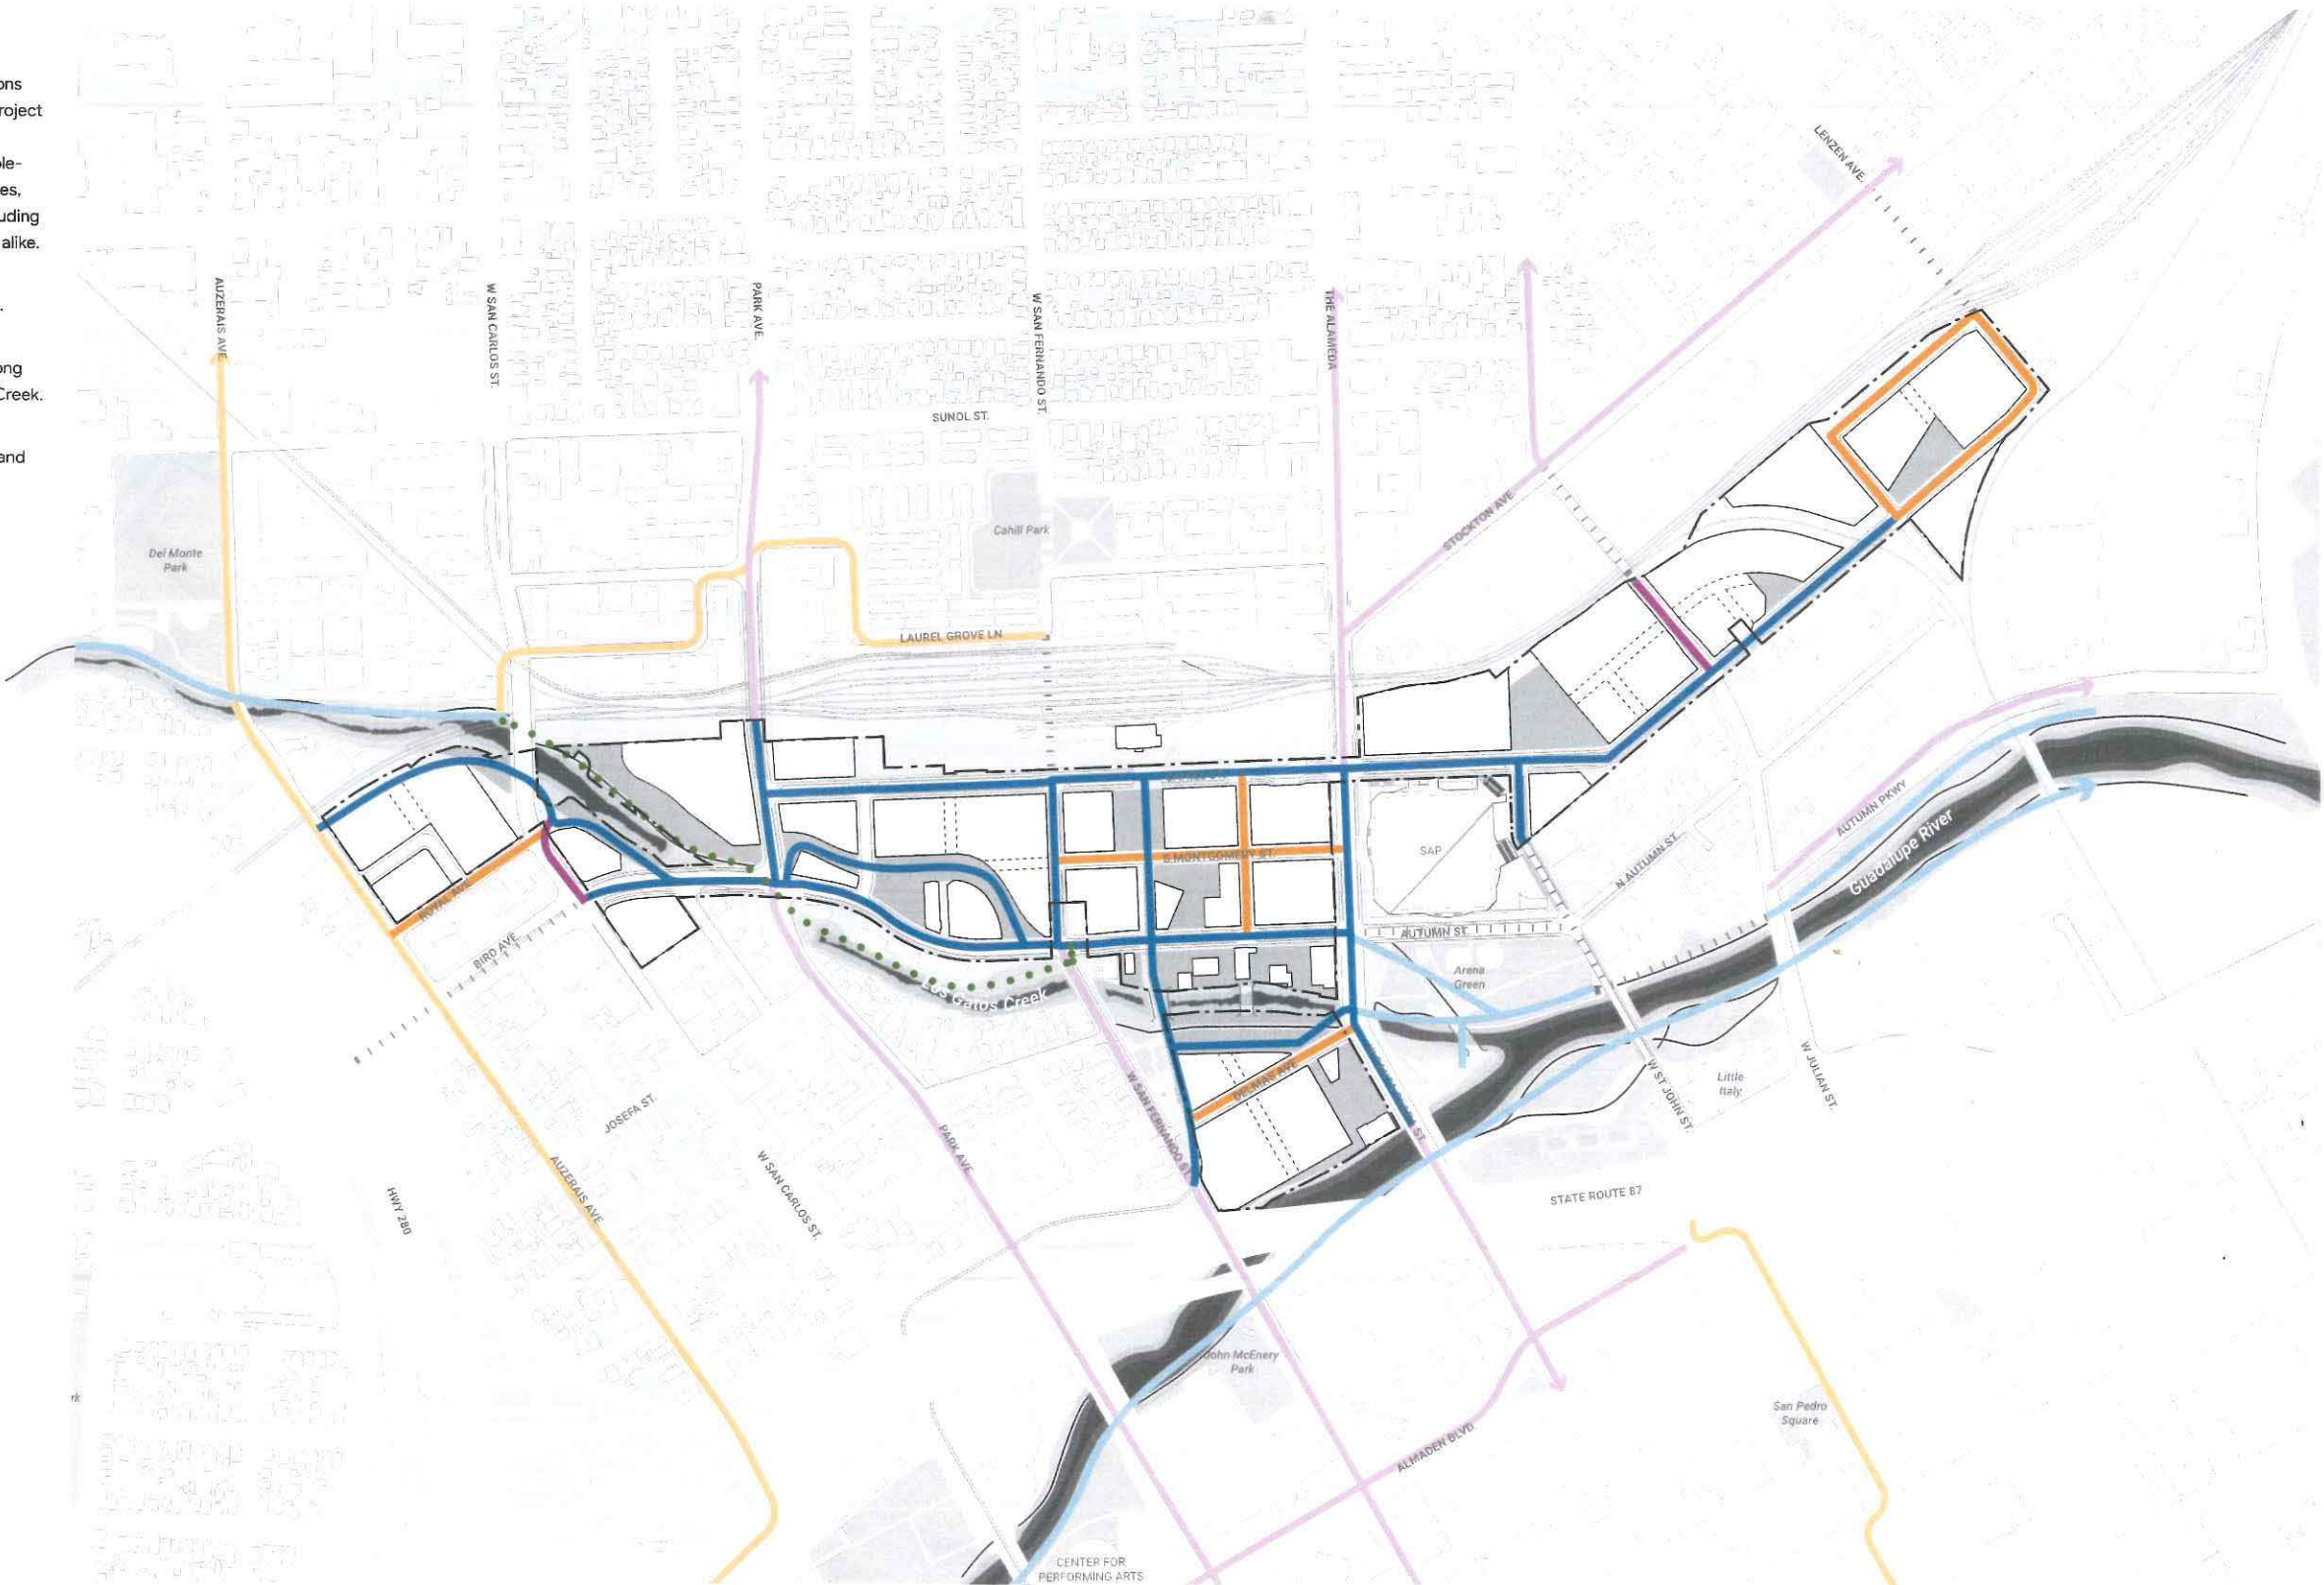

Bicycle Network

The proposed bike network re-connects the San José grid by enhancing existing connections between neighborhoods and creating new connections that complete regional links. The project builds upon intent illustrated in the DSAP and Better Bikeways Plan to optimize multi-modal options, with an emphasis on bicycle and pedestrian network – creating a network of people-centric, not car-centric streets. Facilities would include off-street paths, protected bike lanes, and slow-speed streets that support a comprehensive strategy for “Micro-mobility” — including bikes, scooters, and skateboards — that accommodates commuter and recreational riders alike. Improvements include:

- Protected bike facilities along Park Avenue, W. San Fernando Street, W. St. John Street, S. Autumn Street, and Cahill Street including extensions from Park Avenue to Julian Street.
- Off-street path connections along Los Gatos Creek within the project boundary and along Green Meander open space where project does not directly connect to the Los Gatos Creek.
- Strengthen desire line north of the Santa Clara Valley Transit Authority (VTA) alignment from San Fernando Street as a multi-use path as a key connection between the Station and Downtown.
- Buffered on-street bike lanes are provided to create minor connections on streets with constrained dimensions, including Julian Street and San Carlos Street.
- All other streets are envisioned to be traffic calmed, shared local connector streets that promote slow-speed.

3.12.1 Bicycle Network

### 3.19.1 Proposed Stormwater Control Plan

#### Legend

- Private Drainage Management Area
- - - Right of Way (ROW) Drainage Management Area
- - - Development Boundary
- Proposed Buildings
- Open Space

#### Notes:

1. Public streets which are modified and trigger treatment requirements per the GSI Plan will be designed to incorporate stormwater treatment facilities in the public ROW.
2. Private parcels will meet all stormwater management requirements per the GSI Plan.
3. Refer to Infrastructure Framework Section 12 - Stormwater Management for further information.
4. Biotreatment areas shown are sized using the '4% drainage management area calculation' and area sized to a minimum of 4% of the contributing DMA's impervious area.
5. Refer to the attached Stormwater Evaluation Form for the following stormwater plan items: Pervious and impervious surface comparison table; treatment control measure summary table; site conditions table; source control measures; site design measures.
6. Biotreatment soil mix shall meet all specifications per the Santa Clara Valley Urban Runoff Pollution Prevention Program (SCVURPPP) C.3 Handbook Appendix C. Biotreatment soil shall have sufficient permeability to infiltrate runoff at a minimum rate of 5 inches per hour during the life of the facility and have sufficient moisture retention to support healthy vegetation. These requirements are consistent with the Municipal Regional Permit (MRP).

#### Project Site Information:

- Soils Type: Clay Loam (D)
- Groundwater Depth: 10 - 46 ft
- Name of Receiving Body: Los Gatos Creek, Guadalupe River
- Flood Zone: Undetermined (Zone D)
- Flood Elevation (if applicable): n/a

## Stormwater Management Conceptual Infrastructure Plan

10/10/2019

### 3.20.1 Existing and Proposed Water Plan

#### Legend

- Proposed Water
- W- Existing Water
- Development Boundary
- Abandon Water Lines (work by SJWC)
- Proposed Buildings
- Open Space

#### Notes:

- <sup>1</sup> Existing utility locations are approximate and shown for reference only. Additional utility survey is required to determine exact pipe structure locations.
- <sup>2</sup> All new water mains will be constructed by the San José Water Company.
- <sup>3</sup> New fire hydrants will be located per San José Fire Department requirements.
- <sup>4</sup> Utility layouts are conceptual and may be revised to reflect final development requirements.
- <sup>5</sup> Refer to Infrastructure Framework Section 8 - Potable Water System for further information.

Conceptual Infrastructure Plan

10/10/2019

### 3.21.1 Existing and Proposed Sanitary Sewer & Automated Waste Collection Plan

#### Legend

- Proposed Sanitary Sewer
- Proposed Automated Waste Collection System (AWCS)
- - - Emergency Sanitary Sewer Overflow
- - - Existing Sanitary Sewer
- - - Development Boundary
- - - Demo & Remove Existing Sanitary Sewer
- Proposed Buildings
- Open Space

#### Notes:

1. Existing utility locations are approximate and shown for reference only. Additional utility survey is required to determine exact pipe structure locations.
2. An onsite water reuse facility is proposed to support the wastewater management needs of the development. Connection with the City sanitary sewer is also under review.
3. Sanitary solids produced as a by-product of the onsite wastewater treatment processes are proposed to be managed onsite. These solids can also be pumped into the City's sanitary sewer network.
4. Utility layouts are conceptual and may be revised to reflect final development requirements.
5. Refer to Infrastructure Framework Section 9 - Sanitary Sewer System and Section 15 - Solid Waste Collection for further information.
6. The Northern Zone for District Infrastructure may be deleted in the future depending on design progression and detailed planning.

### 3.22.1 Proposed Recycled Water Plan

#### Legend

- Existing Recycled Water
- Proposed Recycled Water
- Development Boundary
- Proposed Buildings
- Open Space

#### Notes:

- <sup>1</sup> Existing utility locations are approximate and shown for reference only. Additional utility survey is required to determine exact pipe structure locations.
- <sup>2</sup> Onsite production of recycled water at the water reuse facility is proposed. Extension of the South Bay Water Recycling recycled water pipeline is also under review.
- <sup>3</sup> Utility layouts are conceptual and may be revised to reflect final development requirements.
- <sup>4</sup> Refer to Infrastructure Framework Section 10 - Non-Potable Water System for further information.
- <sup>5</sup> The Northern Zone for District Infrastructure may be deleted in the future depending on design progression and detailed planning.
