Hi Julie,

Thank you for checking! It looks good to me.

Thank you,

Jeff

Subject: Building Section text review

In the Sustainability section of Google's draft design guidelines are the following guidelines (not standards). They will of course follow any other applicable policies/regulations but let me know if you have any edits to the below by noon tomorrow. Thanks!

1. **Jeff S.:** G5.13.5 Building stormwater management. Buildings should treat runoff through various strategies — green roofs, at-grade planters, and rainwater harvesting.
2. **Peggy:** G5.13.6 Food waste. Appropriate handling of food waste should be incorporated into each building's interior infrastructure organization to efficiently deliver food waste to the automated waste collection system (AWCS) or regional waste collection system.

Let me know if there are any questions.

-Julie
