[External Email]

Hi Dev,

I think this is a particularly important initiative for the neighborhoods in your district. I live near Lincoln and Park, and remember reading a report by some university students that were evaluating the neighborhood as an input for the Google Campus. They correctly identified that where I'm living has no green spaces. The ones we do have don't offer shade and take time to get to. For a city of our size and reputation not to have more pocket parks and areas of relief, it's pretty sad. It's the number one reason my family wants to move out of the neighborhood. Thanks for bringing focus to this much needed pain point. Great opportunity here!

Urban Greening

Through an approach called Urban Greening, nature can be brought back into our streets and public places, where it can help alleviate problems exacerbated by climate change such as increased urban heat, worsened air quality, and flooding, while also making our cities safer, and a more appealing place to live, work, and play.

Urban greening includes streets with dense tree canopies, providing shade, and cleaner air along with habitat for native species. Concrete and asphalt can be removed and replaced with vegetation that absorbs stormwater and filters it before it reaches the Bay.

Why do we need to address this now? San Jose is already undertaking a widespread street repaving program, and many streets are being redesigned to promote transit and bike use. By incorporating greening into these plans, we can speed along these changes and do so more efficiently, by aligning construction projects so we rebuild a street once and do so in a way that meets a variety of needs at the same time. Additionally, this past year we saw significant impacts from heat, wildfires and poor air quality during the summer months, and we know that's going to get worse.

I am calling for a comprehensive, equity-focused implementation plan. Climate change is not going to impact all communities in the same way, and we have to acknowledge that some areas of San Jose have been historically underserved by the city government. This plan requires the city to invest where the need is greatest. Some neighborhoods already have extensive tree canopy and more parks, but those that don't suffer more when temperatures rise.

A lively discussion on this and other city priorities will take place during the City Council Priority Setting Meeting Thursday February 25th 1:30-4:30pm. Tune in online here: <https://sanjoseca.zoom.us/j/97709973705>

I encourage residents of San Jose to support this effort by contacting your city councilmember and the Mayor and ask them to support making urban greening a council priority. If you'd like to learn more, check out SaveSFBay.org where they have more information about the benefits of urban greening.

Join me **TODAY**, Wednesday, February 23rd at 5:30 p.m. on Facebook for a full interview with Policy Manager, Josh Quigley, from Save the Bay about why we need this policy now.
